Praktikum – Bagian 2: Membuat Aplikasi Movie List Code Igniter Menggunakan Public API

Langkah	Keterangan
1	Duplikasi Project Code-Ketiga dan berilah nama project Code-ketujuh

2 Lakukan perubahan konfigurasi \$config['base_url'] = 'http://localhost/rest-api/Code-ketujuh/'; pada config.php

```
$config['base_url'] = 'http://localhost/ci/codeketujuh/';
```

Buatlah sebuah file **index.php** pada folder **view/movie/** dan tuliskan script seperti gambar dibawah ini:

Buatlah sebuah file controller **Movie.php** pada folder **controller** dan tuliskan script seperti gambar dibawah ini:

```
application > controllers > 🦛 Movie.php
                <?php
           2
           3
               defined('BASEPATH') OR exit('No direct script access allowed');
           4
           5
               class Movie extends CI_Controller {
           6
                    public function index()
           7
           8
           9
                        $this->load->view('template/header');
                        $this->load->view('movie/index');
          10
                        $this->load->view('template/footer');
          11
          12
          13
          14
          15
          16
               /* End of file Movie.php */
          17
          18
5
      Selanjutnya buat file javascript script.js pada folder assets/js/ kemudian tuliskan script
      seperti gambar dibawah ini:
```

```
sets > js > JS script.js > 🕤 searchMovies > 🔑 data > 🥬 'apikey'
      $('#search-text').on('keyup', function(e){
          if(e.keyCode == 13)
               searchMovies();
      $('#btn-search').on('click', function(e){
          searchMovies();
      $('#movie-list').on('click', '#btn-details', function(e){
          $.ajax({
               type: 'GET',
dataType: 'json',
                    'apikey' : 'a9ae2c7f', //API Key
'i' : $(this).data('id')//parameter i untuk pencarian film berdasarkan id film /omdbID
               success: function(result){
  if(result.Response === "True"){
                       <div class="col-md-8">

                                  class="list-group-item"><h4>`+ result.Title +`</h4>class="list-group-item">Released : `+ result.Release +`
                                  class="list-group-item">Genre : `+ result.Genre +`
class="list-group-item">Writer : `+ result.Writer +`
class="list-group-item">Actors : `+ result.Actors +`
                                  class="list-group-item">Production : `+ result.Production +`
                                  class="list-group-item">Plot : `+ result.Plot +`
```

```
$('#search-text').val("");
6
                               Tambahkan script pada footer.php pada folder template seperti gambar dibawah ini:
                                                           Tambahkan juga script pada header.php pada folder template seperti gambar dibawah ini:
7
                                                     <!doctype html>
<html lang="en":
                                                                <meta name="viewport" content="width=device-width, initial-scale=1, shrink-to-fit=no">
                                                               <!-- Bootstrap CSS -->
<link rel="stylesheet" href="<?= base_url();?>assets/css/bootstrap.css">
                                                               clink rel="stylesheet" href="https://stackpath.bootstrapcdn.com/bootstrap/4.4.1/css/bootstrap.min.css" integrity="sha384-Vkoo8x4CGsO3+Hhxv8T/
